

PETER AKPAN JR.

Petre Pann | Data Analyst & Tech Instructor

Uyo, Akwa Ibom State, Nigeria | petrepann.tech@gmail.com | +234 906 601 7762 | linkedin.com/in/petre-pann-profile

PROFILE

I build things that turn raw numbers into decisions people can actually act on. My work has lived inside messy datasets for a while now, pulling out the patterns that matter and shaping them into dashboards, reports and training that non-technical people can pick up and use. Because I teach as much as I analyze, I don't just build the tool, I explain what it's showing and why it matters. I'm looking for a data analyst internship where I can keep sharpening that skill set while contributing real, usable work from the first week.

CORE SKILLS

- Excel: pivot tables, advanced formulas, chart building, data cleaning and dashboard-style reporting
- SQL: aggregate functions, joins, subqueries, and query debugging on real relational databases
- Python: pandas for data manipulation, data structures, and foundational object-oriented programming for data workflows
- Power BI: DAX measures, data modeling, star schema design, and multi-page interactive reports
- Requirements gathering and applied research to inform tool design and business recommendations
- Comfortable learning new BI and visualization tools quickly, including Tableau

PROFESSIONAL EXPERIENCE

Data Analyst & Tech Instructor *Start Innovation Hub / Talentport* August 2024 – Present

- Design and deliver data analytics curriculums across multiple training cohorts, covering Excel, Power BI, SQL and Python for aspiring analysts
- Analyze real and simulated business datasets to build reports and dashboards used directly in training and client-facing case studies
- Build custom tools and systems for businesses and organizations to support their day-to-day operations and reporting needs
- Conduct research to inform curriculum design, tool development and client-facing recommendations
- Work directly with stakeholders to translate business problems into data-driven solutions

Founder *Pann Labs* Ongoing

- Run Pann Labs as an independent practice, with Data Baze as the flagship learning platform for data analytics students, featuring a leaderboard, test engine and code-based assessments
- Build practice datasets and step-by-step reference materials used by learners to work through real analyst tasks, from data cleaning to dashboard building

NOTABLE PROJECTS

- Built a full Power BI project around a Nigerian retail dataset with a 15,000-row fact table and five dimension tables, including 27 custom DAX measures across five report pages
- Designed and built an interactive two-page HTML dashboard using Chart.js for a simulated retail analytics case study spanning six regions
- Developed a hospital dataset with over 225,000 rows across seven sheets and built an accompanying dashboard blueprint used as a student reference guide
- Delivered hands-on SQL training sessions covering aggregate functions, joins and subqueries using real-world style databases
